Doulton Ultracarb Element

10 Inch Ultracarb Candle/ 9 3/4 Inch Cartridge Water Filter Element

These cleanable filter elements are designed to remove suspended solids, pathogenic bacteria, hydrogen sulphide, and lead. In addition, they will improve taste and reduce iron contamination. These filter elements have been tested in accordance with NSF protocols for cyst, turbidity, particulates, and chlorine reduction (Class 1). The cartridges are based on a Stensyl ceramic pre-filter shell. Inside the ceramic shell is a post-filter which is manufactured by combining a zeolite metal ion reduction medium, granular carbon, and powdered carbon to form a tightly packed matrix. The candle is fitted with a threaded plastic cap on one end; the cartridge is open on both ends.

† Minimum working pressure	125 psig

Organic Chemicals

Pesticides, herbicides and organic solvents

Metals

Lead, Iron, Aluminum

Taste & Color

Hydrogen Sulphide, Iron, etc.

Lead Reduction

Lead is seldom found naturally in domestic water supply but can result from the dissolution of lead pipes which may still be in use in old water systems. The zeolite metal ion reduction medium in the Ultracarb element effectively reduces the lead content in drinking water.
